SUMMARY

Final-year Computer Science student who builds full-stack web applications with React.js, Node.js, Express.js, PostgreSQL, and MongoDB — from REST APIs and real-time features to role-based authentication, across projects ranging from internal infrastructure tools to healthcare coordination platforms. Comfortable working through the full stack, with a solid grounding in data structures, algorithms, and system design.

TECHNICAL SKILLS

Languages: C++, C, Python
Frontend: React.js, Tailwind CSS, TanStack Start, Responsive Design
Backend: Node.js, Express.js, REST API Design, JWT Authentication, WebSockets
Databases: PostgreSQL, MongoDB, Redis, Supabase
Tools: Docker, Firebase, Git, GitHub, VS Code
Core Concepts: Data Structures & Algorithms, OOP, DBMS, System Design Fundamentals

PROFESSIONAL EXPERIENCE

- Full Stack Development Intern — Maruti Suzuki India Limited**
Gurugram, Haryana

[GitHub](#) | May 2026 – Jun 2026

 - Started by researching how applications map to physical racks, then built App2Rack Infra Control — a full-stack infrastructure management platform (CMDB, observability, and AI ops) using TanStack Start, React.js, Tailwind CSS, and PostgreSQL, with modules for applications, servers, racks, incidents, and audit logs, plus a visual topology graph for dependency mapping.
 - Added real-time dashboards, incident tracking, and capacity-planning calculators, then containerized the app with Docker and deployed it on Cloudflare.
 - Integrated AI-powered log analysis, root cause analysis, and optimization suggestions, gated behind a credit system with its own wallet and usage-analytics dashboard.
 - Set up role-based access control, bulk CSV import, and a tiered subscription/billing system with a scenario switcher for demos, and wrote infrastructure reports to keep the engineering team in the loop.
- Web Development Intern — Maruti Suzuki India Limited**
Gurugram, Haryana

May 2025 – Jun 2025

 - Built the Control Number Data Updation System (still ongoing) with ASP.NET Web Forms and Oracle PL/SQL to log and manage vehicle fault records — replacing what used to be a manual, paper-based process.
 - Designed a two-page interface for defect reporting and wrote the PL/SQL packages and stored procedures behind it to handle data operations, enforce validation, and support real-time updates from the field.
 - Cut down manual errors and sped up internal workflows by automating data entry and connecting the frontend forms directly to the backend logic.

PROJECTS

- RapidResQ — AI-Enabled Emergency Response & Healthcare Coordination System**

[GitHub](#)

 - Built a full-stack emergency response platform that connects patients, hospitals, and ambulances, with real-time location tracking and live status updates powered by Supabase Realtime.
 - Added an AI-powered triage module that prioritizes incoming cases by severity, so dispatch decisions don't rely purely on manual judgment.
 - Handled secure authentication, role-based access control, and the PostgreSQL data layer through Supabase, since the platform deals with sensitive patient, hospital, and ambulance data.
- SkyWay — Multi-Role Airline Operations Platform**

[GitHub](#)

 - Built and deployed a unified airline platform on Cloudflare with four separate role-based experiences — Passenger, Ops, Support, and Admin — all sharing one design system and auth flow, with typed redirects and role-guarded layouts.
 - Built an Operations Control Center covering 12+ routes with live flight, delay, and weather data, plus an AI Copilot that gives structured recommendations and links directly into the Flights and Analytics views via typed URL params.
 - Built a Support portal with ticketing, audit trails, and file attachments handled through secure signed URLs, with RLS-enforced access and mime/size checks.
 - Designed an Admin portal covering fleet, routes, pricing, security, and analytics on Postgres, using RLS and a security-definer role system to prevent privilege escalation.

EDUCATION

VIT Bhopal University <i>B.Tech in Computer Science Engineering</i>	<i>Bhopal, India</i> <i>Sept(2023)-Present</i>
The Heights Sr. Sec. School <i>Class XII (CBSE)</i>	<i>Jhajjar, Haryana</i> <i>May 2023</i>
G D Goenka Public School <i>Class X (CBSE)</i>	<i>Jhajjar, Haryana</i> <i>May 2021</i>

ACHIEVEMENTS & CERTIFICATIONS

- Cleared inter-college rounds of Smart India Hackathon (SIH)
- The Bits and Bytes of Computer Networking — Google (Coursera), 2025
- AWS Cloud Technical Essentials — Amazon Web Services(Coursera)
